

IN SEARCH OF YOUTH

# UNRAVELING THE MYSTERY OF A WRINKLE

*Why doesn't a woman of fifty-five look the same as she did when she was twenty-five? • The search for the answer to this question led Doctors Lorraine Faxon Meisner and Michael Schinitzky to look for clues not in old skin, but in prematurely-aged skin. • These findings have resulted in a topical skin care formulation that is so effective, it actually helps slow down the skin's visible signs of aging. • Flawless, perfect skin is not a miracle of youth. • Rather, it is the result of new skin cells being created in the healthiest environmental conditions and being nourished with a constant supply of essential building materials—amino acids, minerals and vitamin C. • The surface of the skin acts as a 'visual barometer' reflecting the health of the skin cells below. Simply explained, skin created in ideal conditions cannot develop a blotchy, lined or flacid appearance. The very name 'age spot' gives us one of the best clues. • You never see them on young, healthy skin. • Using ultraviolet light, we are able to monitor the appearance of the skin before and after the topical application of Cellex-C. • Gradually the skin's surface begins to reflect a youthful appearance. • The appearance of lines is visibly diminished, skin feels smoother and firmer, and facial contours become more youthfully defined. ■■*

## CELLEX-C APPLIED TO LEFT SIDE

The results of using Cellex-C. Applied to the right side (left in picture) underneath the eye—not on upper eyelid—and cheek. Shown after eight months of topical application.

## ULTRAVIOLET REVELATIONS

We can see that the improved firmness and texture of the skin directly correlates to the lighter areas of skin visible under ultraviolet light. • After using Cellex-C, for eight months, underneath the eye and on the cheek (as seen on the left of the photographs), we can clearly see the difference. • The dark 'staining' has begun to dissipate substantially. • This translates (on the surface that we can see) into firmer, smoother, more youthful looking skin.
